AZOMITE® - Products and Packaging

AZOMITE® PRODUCTS

1. **Green Label** - Micronised **AZOMITE®**: Less than 325 mesh, this powder is used for feeds and fertilizer.
2. **Orange Label** - Granulated **AZOMITE®**: Less than 4 to 12 mesh, larger fertilizer granules for easy spreading with mechanical fertilizer spreaders. Many people do not like the difficulties associated with handling the dusty micronized product (Green Label) so we have created the Orange Label granules by agglomerating the dust.
3. **Purple label** - Granulated **AZOMITE®** Soil Sweetener: a 50/50 blend of **AZOMITE®** and a high quality calcium limestone. This product was created because recent scientific studies indicate that mineral deficiency is the root cause of many forms of tree decline worldwide.

As forests age, the soil becomes more acidic and “locks up” essential minerals. Adding **AZOMITE®** Soil Sweetener, which is 50% calcium carbonate and 50% **AZOMITE®**, reduces soil acidity and re-supplies trace mineral elements.

Trees absorb the Soil Sweetener directly through the bark and leaves. A direct application of **AZOMITE®** Soil Sweetener to the bark heals large cracks with infestations, and if they are not too devastated, they will respond quickly and show progress within a few months.
